Mining Solutions
Forensics, Drug & Alcohol

Forensics, Drug and Alcohol

FDA Mining Solutions is a company comprised of experts in the fields of forensics, drug testing and mining. As such our team is able to provide the mining industry with a complete suite of products and services that can not only detect drug and alcohol use in the workplace, but prevent and deter employees from engaging in such illegal activity in the first instance.

As drug users go about their daily routines they leave a trail of invisible drug residue on the surfaces they touch. **FDA Mining Solutions** provides a unique service that discreetly tests these surfaces (such as walls, ceilings, beds, vehicles etc.) obtaining previously unattainable information about the drug activity in the work place. Preliminary results can be obtained within minutes.

FDA Mining Solutions has a wide range of drug and alcohol kits which are the market leaders for sensitivity and specificity. Our kits are capable of detecting drugs in all types of bodily fluids including blood, urine and saliva and are internationally accredited. A full forensic report is provided to the employer as part of our comprehensive and cost effective service.

FDA Mining Solutions as part of an introductory offer with a whole site test, **FDA Mining Solutions** will surface test 5 rooms for free when you mention the code name **STEALTH**.

We look forward to ensuring that your mine site is drug free.
